

Scenario:

You are an artist that is wanting to expand your horizons and add to your collection for your upcoming art show. You want to create art with a new muse as well as see what other artists have been doing around you.

Task 1: Generate a random topic to create art based on with the options Skylines and Nature selected under genres.

Task 2: Create an account and go find a post in your feed that you like and like it.

Task 3: Find posts that are similar to the post you liked.

Notes

What changes should you make to your application (min 3 Things):

- 1) I should add a back button because there is no way to go back to the checklist page when searching for a selective topic.
- 2) I should add a reroll button for the random topic when it's generated so artists can get a new random one if they please.
- 3) I should make the tags on posts clickable and lead to a page of posts with that tag.

What you need to keep the same (min 3 Things):

- 1) The ability to be selective with the random topic generated with the genre selection page.
- 2) The buttons at the bottom after you create an account to switch between your profile, search, and explore.
- 3) Clicking on people's posts enlarges them.
